Luminance a genuine wizard in Oz

Australian law firm, Hamilton Locke, has chosen to deploy Queen's Award winner Luminance's machine learning technology in its Sydney office.

The adoption of the Luminance platform was part of the firm's strategy to deliver the best solutions and legal advice to clients and marks the Cambridge AI company's ninth customer in the country as the Australian legal market continues to drive adoption of technology.

Hamilton Locke, as a proponent of cutting-edge legal technology, chose to incorporate Luminance into its daily processes following a live due diligence review containing over 1,000 documents, including commercial contracts, employee agreements and financial statements.

The team were most impressed

with the technology's ability to automatically identify and cluster clauses, allowing the firm's lawyers to immediately focus the review from day one.

"Luminance's sophisticated yet easy-to-use technology has truly strengthened the firm's due diligence offering," said Gordon McCann, partner at Hamilton Locke.

"The Australian legal market has proven itself to be a key driver of innovation."

"There is a lot of room for human error if you are manually reviewing documents but Luminance's unique anomaly detection functionality flags any potential issues, meaning we can

be sure all risk areas have been considered.

"From my perspective, it was very pleasing to know that our clients were the ultimate beneficiaries of this platform as it became clear very early in the pilot that the scope and accuracy of our due diligence was greatly enhanced."

Emily Foges, CEO of Luminance, added: "The Australian legal market has proven itself to be a key driver of innovation and we are pleased to welcome Hamilton Locke to the growing number of Australian law firms adopting our technology to streamline due diligence."

Hamilton Locke acts for a number of high-profile clients including Macquarie Bank, Alceon, Moelis Australia, Resimac, CHAMP Ventures and Cate Equity.
