

REDACTION PROJECT

Vieira de Almeida

Leading Portuguese law firm, Vieira de Almeida (VdA), recently deployed Luminance on a time-sensitive redaction project of the “utmost importance”. The team of 20 legal professionals were tasked by a client who was of great strategic significance to the firm – indeed, “one of the most important companies in Portugal” - to redact personal information in a dataset of over 8,000 documents within a “very strict deadline”.

By using Luminance, VdA were able to begin their review within hours of Luminance being deployed. Less flexible platforms often need extensive rule-creation and user onboarding incurring great financial and time costs. However, as Luminance requires no lengthy set up or configuration, the firm could begin their urgent review straight away, aided by the platform’s intuitive and easy-to-use design. This was of paramount importance as the firm had involved legal professionals from different practice areas that normally do not work in due diligence and thus were not familiar with the Luminance platform.

VdA also found that Luminance’s project management and collaboration capabilities were critical in completing a review that would have otherwise been “more complicated or even impractical,” with the firm estimating time savings of around 50% in comparison to previous manual methods. Gonçalo

Ferreira Macedo, a lawyer involved in the project, even noted that without Luminance they “would still be doing the first batch of documentation, probably!” Using Luminance’s in-built workflow features, the team of 20 legal professionals were able to coordinate the review across both the Lisbon and Porto offices. David Cuba Topete, Associate at VdA, cites the ability to coordinate and allocate tasks between

KEY FINDINGS

- Even though some team members had never used the platform before Luminance’s quick deployment and intuitive design meant that the team were able to complete the 8,000-document redaction project 50% faster than manual methods without any product training
- Luminance’s project management capabilities and language-agnostic algorithms facilitated collaboration among a team of 20 professionals, across multiple offices, working in both English and Portuguese

Vieira de Almeida

team members as an invaluable asset in understanding the progress of each workstream. On a project of this nature “it was important for the firm to allocate tasks between those doing the redacting and relocate to those reviewing before converting those documents into the final version”. The team were “in no doubt” that this project would have been unfeasible without Luminance’s collaboration tools which provided unparalleled confidence that no document had been missed.

In a redaction project involving a huge collaborative effort it was vital that lawyers were fully apprised of all sensitive information requiring action across the data set. Hence, VdA concluded that “Luminance and the approach applied were crucial for the outcome of this project.” VdA chose Luminance for the Due Diligence project due to its market-leading core technology, the Legal Inference Transformation Engine (LITE), which combines revolutionary pattern-recognition technology with supervised and unsupervised

machine learning algorithms. By reading and forming an understanding of all documents within a dataset, Luminance ensures that all relevant results are surfaced at speeds and in volumes far exceeding human capacity.

“I was very sceptical at first about using this platform and I can say that I was surprised. since we saved lots of time. When they told me we had 8,000 documents to redact and review, I thought it would take much longer than actually did.”

DAVID CUBA TOPETE, ASSOCIATE

“Luminance’s technology is flexible and has a wide range of applications across a variety of projects (...) therefore we apply Luminance not only to due diligence itself. Actually we have received benefit from using Luminance on alternative use cases and projects of the utmost importance that without Luminance would have been more difficult to manage”

**SOFIA BARATA, HEAD OF
CORPORATE SERVICES UNIT**

Throughout deployment and use, VdA were impressed with Luminance’s Support team whom they described as “perfect, trying to solve issues as fast as they could. Everyone was very happy with that.” Luminance’s Support personnel, along with designated Account Managers, were available 24/7 to help the firm quickly get the most from using Luminance, providing assistance and guidance on practices that would best suit VdA’s culture and workflow. Using Luminance, VdA were able to review and redact their document set, confident that nothing had been missed and completed the redaction in half the time required by previous approaches. Indeed, Luminance was so beneficial that despite initial uncertainty around the need for machine learning technology, Associate David Cuba Topete declared that he already suggested an internal workshop to his Head of Practice “so everyone can work with this tool and use it in upcoming projects.”

About Luminance

Luminance is the world’s most advanced AI technology for the legal processing of contracts and documents. Founded by mathematicians from the University of Cambridge, Luminance’s AI reads and forms a conceptual understanding of documents in any language. Luminance uses this understanding to augment the spectrum of legal matters, from AI-powered contract drafting, negotiation and review to investigations and eDiscovery. Luminance is used by over 400 customers in 60 countries, including all of the Big Four consultancy firms, a quarter of the world’s largest law firms and multinational organisations such as Tesco and Ferrero.
